

### 3: LOGICAL DATABASE DESIGN

#### 3.1 Business and Application Environment

TPC Benchmark™ H comprises of a schema and set of business queries representative of complex business analysis of a wholesale supplier business application.

The queries provide answers to the following classes of business analysis:

- Pricing and promotions;
- Supply and demand management;
- Profit and revenue management;
- Customer satisfaction study;
- Market share study;
- Shipping management.

## 3.2 Database Entities, Relationships, and Characteristics

The schema of the TPC-H database consists of eight tables (the Base Tables). The primary keys and the foreign keys are indicated in Figure 2. For instance LINEITEM(XX, YY) REFERENCES PARTSUPP(PSPARTKEY, PS\_SUPPKEY), where PARTSUPP(PSPARTKEY, PS\_SUPPKEY) is the key of PARTSUPP.

## 3.3 Datatype Definitions

### 3.3.1 The following datatype definitions apply to the list of columns of each table:

- **Identifier** means that the column must be able to hold any key value generated for that column and be able to support at least 2,147,483,647 unique values;
- **Integer** means that the column must be able to exactly represent integer values (i.e., values in increments of 1) in the range of at least -2,147,483,646 to 2,147,483,647.
- **Decimal** means that the column must be able to represent values in the range -9,999,999,999.99 to +9,999,999,999.99 in increments of 0.01; the values can be either represented exactly or interpreted to be in this range;
- **Big Decimal** is of the Decimal datatype as defined above, with the additional property that it must be large enough to represent the aggregated values stored in temporary tables created within query variants;
- **Fixed text, size N** means that the column must be able to hold any string of characters of a fixed length of N.
- **Variable text, size N** means that the column must be able to hold any string of characters of a variable length with a maximum length of N. Columns defined as "variable text, size N" may optionally be implemented as "fixed text, size N";
- **Date** is a value whose external representation can be expressed as YYYY-MM-DD, where all characters are numeric. A date must be able to express any day within at least 14 consecutive years. There is no requirement specific to the internal representation of a date.

## 3.4 Table Layouts

### 3.4.1 Required Tables

The following list defines the required structure (list of columns) of each table.

The annotations 'Primary Key' and 'Foreign Key', as used in this Clause, are for information only and do not imply additional requirements to implement **primary key** and **foreign key** constraints.

**Comment:** Orders are not present for all customers. In fact, one-third of the customers do not have any order in the database. The orders are assigned at random to two-thirds of the customer. The purpose of this is to exercise the capabilities of the DBMS to handle "dead data" when joining two or more tables.
